Drummond aided in the fire control in Santa Marta's Sierra Nevada.

An Ecological Carpet in the Tractors Maintenance area.

Our workers expand their knowledge.

## Ciénaga's Fire Brigade expressed its gratitude to Drummond for its support in putting out fires in Santa Marta's Sierra Nevada.

Main table of Ciénaga's firemen's nineteenth anniversary.

During the celebration of Ciénaga's Fire Brigade's nineteenth anniversary, the firemen's commander, Lourdes Peña, expressed special gratitude to Drummond Ltd. for its absolute support during the forest fires that occurred in Santa Marta's Sierra Nevada.

The Brigade's commander highlighted the presence of Drummond Ltd.'s operations manager, José Luis Velásquez, and the industrial safety director, Sergio Caballero and thanked them and their entire team for the leadership and support during the fire-control operation.

*"Today we must give thanks to Drummond, because without their help the Sierra would still be burning. We counted on this company to Help us with this issue and they did just that to overcome the difficult situations of Santa Marta's Sierra Nevada's forest fires."* Those were the words spoken by the Commander, Lourdes Peña.

---

Drummond Ltd.: a good neighbor!

## Drummond aided in the fire control in Santa Marta's Sierra Nevada.

Because of the fires that took place in Santa Marta's Sierra Nevada, Drummond Ltd., along with the Red Cross, the Ciénaga and Santa Marta Firemen, the National Risks Management System and Colombia's Air Force (FAC), worked together to end the emergency which placed the zone's communities at risk.

Each of the organizations providing support developed strategies day and night to fight the forest fires, in a terrain hard to get to where Drummond Ltd.'s contribution was fundamental upon supplying over 70,000 gallons of water from its port reserve in order to counteract the conflagration, as well as operational logistics for its distribution, the setting up and operation of a crisis room in its port site, and the logistics for the helicopter and crew's landing and nighttime accommodations.

It is gratifying for the company to be able to contribute to the ecological well-being of this natural reserve, which was declared a world heritage site.

## Drummond Ltd.: a good neighbor!

Supervisor Daniel Dueñas, from the Community Relations department, headed the water-supply activity in Bosconia and in the small town of La Loma.

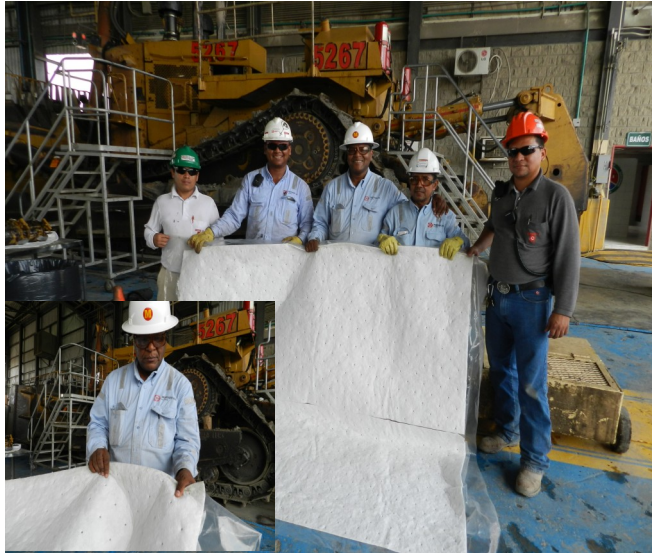

The mayor of Bosconia, Jorge Patiño Gómez, gave thanks to Drummond on behalf of his community for all the work and the water that was supplied to more than 10 neighborhoods during 10 days. The company placed 3 water trucks, fuel and the equipment's operator at the town's disposal and delivered 966,000 liters of water to Bosconia's homes during those days.

Likewise, the water supply tasks in the small town of La Loma were supported by Drummond for over a month in the communities of Sabana Linda, Santo Templo, Dettel, 8 de Diciembre, El Centro, Hernando Restrepo, Puesto Seco and El Carmen, where it supplied 552,000 liters of water.

**Teamwork / Employees responsible with the environment.**

## An Ecological carpet in the Tractors Maintenance area.

Marcos Mendoza, with his coworkers Pompilio Peña and José Brito and supervisors Evaristo León and Edgar Campo.

Marcos Mendoza and Pompilio Peña try out the ecological carpet.

In order to avoid critical oil leaks while maintenance is being performed on the tractors in the Backline workshop, Marcos Mendoza, a technician from the tractors area (group 1), created with his coworker Pompilio Peña, this ecological carpet which prevents the oil from contaminating the floor.

This carpet is made of absorbent material with a plastic carpet that prevents oil from making contact with the floor, making this procedure an environmentally responsible task.

This idea materialized thanks to the teamwork of the workers from the three groups, who backed this new work tool and to the support of assistant superintendent José Arzuaga and supervisor Orlando Puello.

Drummond is proud to have creative workers that are responsible with the environment. That is why the company and its Environmental Department are thankful for the commitment and feeling of environmental responsibility displayed by these employees and their work groups.

## Creativity to take care of the environment.

With the desire to contribute to the environment's preservation and to perform responsible work every day, the Shovels Maintenance department in Pribbenow Mine created this trailer to recycle used oil and separate waste material.

Each of the members of this department's contribution, along with assistant superintendent Juan Carlos Ariza's leadership were important for putting this clean point into operation.

Drummond and its Environmental department thank these workers for their great contributions which make this an operation committed to the environment.

### Our workers expand their knowledge.

As part of the training and learning process our workers receive, a total of nine (9) employees (3 from each group) from the Yard area at Puerto Drummond had the chance to visit Pribbenow Mine's facilities to receive training in safe work techniques and procedures in bulldozer operation. They also took an "Educator of Educators" course in order to become evaluators and multipliers in their work areas in the short term.

Puerto Drummond workers during their training in Pribbenow Mine.

Tools and techniques were developed with this group of employees so that they would be able to multiply among their coworkers the theoretical and practical concepts they acquired, mainly on subjects like the CAT D11R bulldozers' correct operation. When this training ended, the workers demonstrated their skill and willingness to carry out this important task of multiplying knowledge.

### Young recipients of scholarships from Drummond visit the Port and Pribbenow Mine.

A tour was organized for the youths during the visit to provide them with information about each of our production processes and to make them more familiar with Drummond, a company which they somehow form a part of, since they are a part of one of the company's most important social responsibility programs.

As part of the process of accompaniment during their university studies, Drummond invited the scholarship recipients from the La Loma and El Descanso Projects in order to get closer to them. Initially, topics related to their studies were discussed in the visit; they were reminded of the requisites for keeping the scholarships and the importance of taking the utmost advantage of this opportunity to learn, grow and meet the goals they have of becoming a successful professional.
